(东华大学 纺织学院 纺织面料技术教育部重点实验室, 上海 201620)

摘 要:近年生物医用纺织材料已成为国内外重点发展领域,是一项高速发展的新兴产业。作为一种多孔的柔性生物材料,在维护人类健康、解除疾患、提高生活质量的医疗保障体系中扮演着重要的角色。国家的战略需求及产业的迅猛发展对于生物医用纺织材料方向的人才培养提出了巨大的挑战,因此,迫切需要深入研究生生物医用纺织材料方向的实践教学体系。结合“共创式”教学理论,探讨了生物医用纺织材料“共创式”实践教学体系的构建。经过教学实践,成果显著,促进了生物医用纺织材料实践教学建设和人才培养质量的进一步提高。创新、互动、多样化授课方法与手段具有一定的示范作用。

Research on the Co-active Practical Training System of the Biomedical Textile Materials

LIN Jing, GUAN Xiaoning, WANG Fujun, GUAN Guoping, GAO Jing, WANG Lu

(The Key Laboratory of Textile Science & Technology, Ministry of Education,
College of Textiles, Donghua University, Shanghai 201620, China)

Abstract: The biomedical textile material is an emerging industry with the high-speed development. As a porous flexible biomaterial, it plays an important role in the medical security system to the maintenance of human health, the lifting of the disease and the improvement of the life quality. The national strategic demands as well as the industrial rapid development have put forward a great challenge to the personnel training in the direction of biomedical textile materials. Therefore, it is urgent to discuss the practice training system of biomedical textile materials further. Based on the theory of "co-active" teaching, this study discusses the construction of "co-active" training system of biomedical textile materials. After training practice, the achievements are quite remarkable, it promotes the construction of practice teaching and further enhances the personnel training quality. The innovation, interaction, diversification of teaching methods and means have a certain role in the demonstration effect.

Key words: biomedical; textile materials; co-active type; practical training
